

! WARNING: Before entering the MR environment, you must remove **ALL** metallic objects including hearing aids, dentures, partial plates, keys, cell phones, eyeglasses, hair pins, jewelry, body piercing jewelry, watches, safety pins, money clips, magnetic strip cards (credit cards), pens, pocket knives, nail clippers, tools, and clothing with metallic fasteners and/or threads. **DO NOT** enter the MR room if you have any questions or concerns. Consult the MRI technologist **BEFORE** entering the MR room. **The MR magnet is ALWAYS ON.**

Indicate and explain if you have any of the following:

- Yes No Pacemaker or defibrillator
- Yes No Internal wires or electrodes _____
- Yes No Aneurysm clips _____
- Yes No Stent, filter, or coil in a vessel _____
- Yes No Artificial heart valve _____
- Yes No Electrical nerve/bone stimulator
- Yes No Implanted infusion pump/device _____
- Yes No Prosthetic/artificial device (eye, penile) _____
- Yes No Eye surgery _____
- Yes No Ear surgery _____
- Yes No Tissue expander (breast)
- Yes No Spinal or intraventricular shunt _____
- Yes No Cochlear implants
- Yes No Medication patch
- Yes No Pregnant or breastfeeding
- Yes No IUD _____
- Yes No Bullets, BB, or shrapnel
- Yes No Permanent eyeliner or tattoo
- Yes No History of **kidney problems** _____

Please place an "X" over affected area(s)

Please describe your symptoms: _____

- Yes No Have you had an injury related to your symptoms? When: _____
- Yes No Have you had surgery to the area we are imaging? Explain: _____
- Yes No Do you have a personal history of cancer? Explain: _____
- Yes No Have you ever had an injury to your eyes involving a metal object or fragment?
- Yes No Have you had prior exams (MRI, CT, X-rays, etc...) related to today's study?

Where: _____

This exam may require an intravenous injection of a non-iodinated contrast material containing Gadolinium. This helps to enhance the area of interest and provide additional information. It is not the same solution used for CT, IVP's, and angiography. The contrast is given through a small needle or IV in the hand or forearm. As with all injections, there is some risk. Infection, nerve damage, hematoma, extravasation, blood clot, and/or allergic reaction are among the rare complications that can occur. The risks are much greater if there is a history of severe **kidney disease**. The products we use are FDA approved.

I attest that the above information is correct to the best of my knowledge and I have read and understand the content of this form:
